## Wednesday, July 7, 2010

Problem 1. Determine all functions $f: \mathbb{R} \rightarrow \mathbb{R}$ such that the equality

$$
f(\lfloor x\rfloor y)=f(x)\lfloor f(y)\rfloor
$$

holds for all $x, y \in \mathbb{R}$. (Here $\lfloor z\rfloor$ denotes the greatest integer less than or equal to $z$.)

Problem 2. Let $I$ be the incentre of triangle $A B C$ and let $\Gamma$ be its circumcircle. Let the line $A I$ intersect $\Gamma$ again at $D$. Let $E$ be a point on the arc $\widehat{B D C}$ and $F$ a point on the side $B C$ such that

$$
\angle B A F=\angle C A E<\frac{1}{2} \angle B A C .
$$

Finally, let $G$ be the midpoint of the segment $I F$. Prove that the lines $D G$ and $E I$ intersect on $\Gamma$.

Problem 3. Let $\mathbb{N}$ be the set of positive integers. Determine all functions $g: \mathbb{N} \rightarrow \mathbb{N}$ such that

$$
(g(m)+n)(m+g(n))
$$

is a perfect square for all $m, n \in \mathbb{N}$.
