

## EDITORIAL

We have received several requests to print articles on methods of teaching school mathematics. In this issue, Professor Teh Hoon Heng, of Nanyang University, writes on one of these methods - the Discovery Method. We invite readers to write to us on other interesting and refreshing methods of teaching mathematics.

Commencing from this issue, we have a new section on book reviews. We hope that teachers and students of mathematics would find these reviews useful and informative.

In the Problems section, we are publishing the solutions to the mathematical problems which appeared in the first issue of the Medley, together with a new set of problems. We hope that more members would send solutions to these problems and submit further problems for our next issue, which will be published in November, 1974.
